4.0 COUNTY PROFILE

General Information

Population and Demographics

General Building Stock

Land Use and Population Trends

Growth and Development

Critical Facilities

SECTION 4: COUNTY PROFILE

Profile information is presented and analyzed to develop an understanding of a study area, including the economic, structural, and population assets at risk and the particular concerns that may be present related to hazards analyzed later in this plan (e.g., significant coastal areas or low lying areas prone to flooding or a high percentage of vulnerable persons in an area). This profile describes the general information of the County (government, physical setting, population and demographics, general building stock, and land use and population trends) and critical facilities located within SC.

GENERAL INFORMATION

Suffolk County (SC) was established on November 1, 1683, as one of the ten original counties in New York State (NYS). SC was named after the county of Suffolk in England, from where many of its earliest settlers originated (SC Department of Planning, 2005). SC's western border is approximately 15 miles from the eastern border of New York City. According to the 2006 U.S. Census data, the SC estimated population is 1,469,715. SC is one of the 57 counties in NYS and is comprised of 10 towns and 31 incorporated villages. Within each town and village, there are incorporated and unincorporated areas (SC Department of Planning, 2007). The population of SC is larger than twelve states and ranks as the 21st most populated county in the country (U.S. Census Bureau, 2006). SC is bordered by Nassau County to the west and major water bodies to the north, south, and east.

Physical Setting

This section presents location, topography and geology, hydrology and hydrography, climate, land use and land cover.

Location

SC is part of the Long Island Region, located at the southern tip of NYS and east of New York City. SC's land area is approximately 911 square miles. The County is 86 miles long and approximately 15 miles wide. The County is bordered by Nassau County to the west, by the Long Island Sound to the north, the south shore bays and the Atlantic Ocean to the south, and the Peconic Bay System and Gardiner's Bay to the east. The eastern end of SC is divided into two peninsulas, the North Fork and the South Fork, and contains large bays. The County itself is divided into ten towns, which contain many villages and hamlets (Figure 4-1).

As illustrated in Figure 4-2, Long Island's southern coastline faces the open waters of the Atlantic Ocean. Due to its geographic location, SC is exposed and vulnerable to numerous natural hazards, especially the unobstructed path of coastal storms traveling up the Atlantic coast.

Topography and Geology

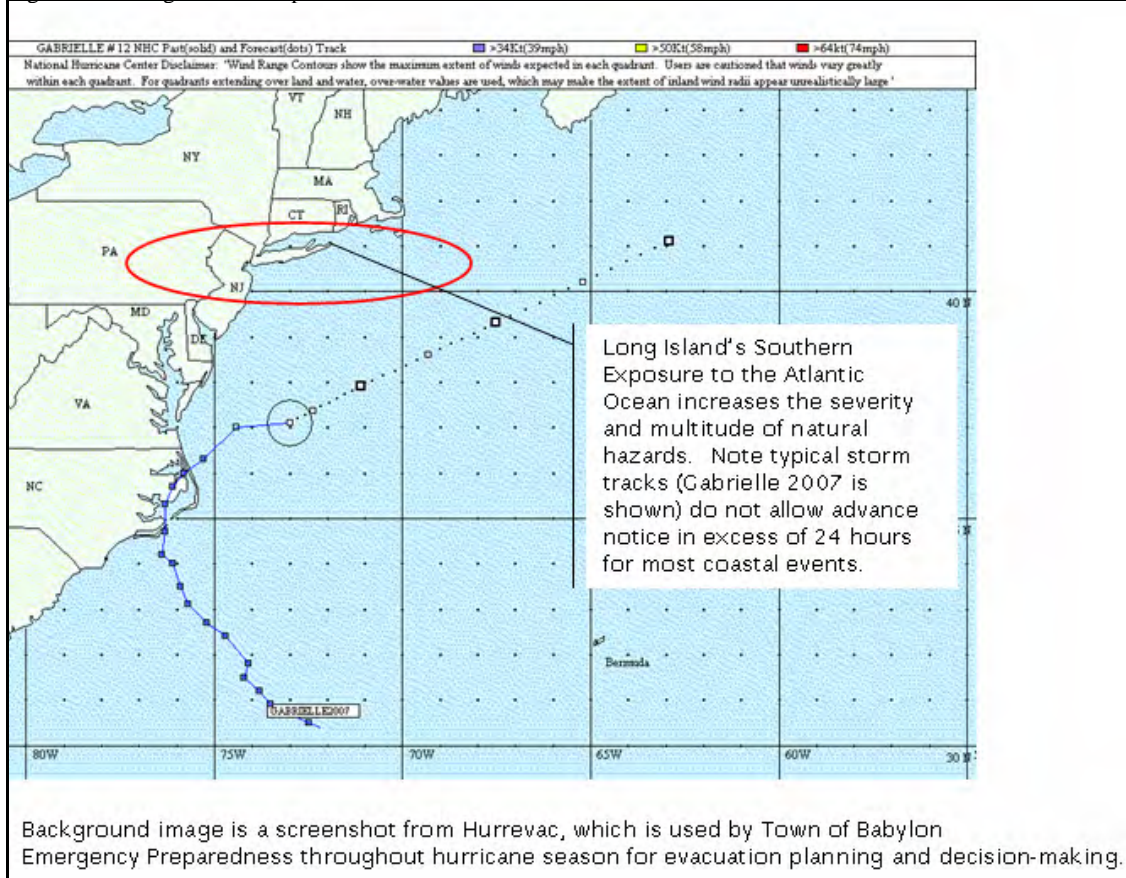

Long Island is located within the Atlantic Coastal Plain, one of the eight major physiographic regions of NYS. The region is underlain by poorly consolidated sedimentary formations of Cretaceous, Tertiary, and Quaternary age formations that gently dip seaward. SC is underlain by predominantly by Quaternary age sedimentary rocks. Wisconsin Glacial Till is apparent everywhere on Long Island. This type of glacial till consists of an unstratified mix of clay, silt, and sand within a mix of rock material ranging from pebbles to giant boulders (USGS, 2003).

Figure 4-2. Long Island's Exposure to the Atlantic Ocean

Source: Town of Babylon Jurisdictional Annex (Volume 2, Section 9.2 of this Plan)

The present landscape of SC was formed approximately 11,000 years ago. As the glaciers receded, deposits of moraine were left behind on the island. The terminal moraine is represented by two ridges that extend the length of Long Island. The southern portion of Long Island consists of an older moraine, the Ronkonkoma moraine. The northern portion of Long Island consists of a younger moraine, Harbor Hill moraine, found along Long Island Sound. Outwash sand and gravel deposits cover much of southern

Long Island. Varved lake clays and swamp peat cover areas flooded by lakes that formed in lowland regions shortly after the glaciers receded (Fagin, 2007).

The topography of SC and Long Island is relatively flat. Elevations in SC range from 0 feet above sea level along the south shore coast of the Atlantic Ocean to nearly 400 feet above sea level in the central and northern parts of SC. The coast provides approximately 1,000 miles of shoreline. The north shore is characterized by headlands that have been steeply eroded into nearly vertical bluffs that reach almost 100 feet high in certain locations. Along the south shore, waves and ocean currents reworked the deposits to form barrier beaches (Bennington, 2005; Wieder, 2007).

Hydrography and Hydrology

Numerous ponds, lakes, creeks, extensive bays, and frontages on the Long Island Sound and Atlantic Ocean make up the waterscape of SC. The major waterways within SC include: the Peconic River, Nissequogue River, Carlls River, Patchogue River, Swan River, Wading River, Carmans River, Great Peconic Bay, Little Peconic Bay, Napeague Bay, Gardiners Bay, Shinnecock Bay, Narrow Bay, Great South Bay, Smithtown Bay, Shelter Island Sound, Long Island Sound, Block Island Sound, and the Atlantic Ocean. All of these water bodies are a part of the Long Island Watershed, which SC is a part of.

The Long Island Watershed covers more than 16,000 square miles in six different states and a small portion of Quebec, Canada. An estimated 8 million people live within this watershed (Green-CT, 2002). In SC, the Long Island Sound Watershed is broken into the North and South. The South Long Island Watershed consists of 625 miles of streams and has a drainage area of 1,961 square miles. Eighteen major water bodies comprise this watershed in both Nassau and Suffolk Counties. The North Long Island Watershed consists of 52 miles of streams and has a drainage area of 912 square miles (NYS-DEC, 1998). Precipitation is the source of all naturally occurring fresh groundwater and surface water in SC. All drinking water on Long Island comes from underground sources. The groundwater reservoir of SC is made up of aquifers and there are three major aquifers found beneath SC. The three main water-bearing units on Long Island, New York—the upper glacial aquifer (water table) and the underlying Magothy and Lloyd aquifers—are the sole source of water supply for more than 3 million people. The deepest aquifer is the Lloyd Aquifer, and it contains water that is up to several thousand years old. The middle aquifer is called the Magothy Aquifer, and it contains water that is up to 1,000 years old in its deepest layers underlying the south shore. This is the largest aquifer and the primary source of public water supply for SC. The shallowest aquifer is called the Upper Glacial Aquifer (SCWA, 2002).

The relative abundance of fresh groundwater on Long Island has allowed extensive growth and development. About 3.1 million people on Long Island rely on water pumped from about 1,000 public supply wells that withdraw about 400 million gallons per day (Mgal/d) from the ground-water reservoir (Nemickas et al., 1989).

Climate

The climate of NYS is very similar to most of the Northeast United States and is classified as Humid Continental. Differences in latitude, character of topography, and proximity to large bodies of water all have an effect on the climate across NYS. Precipitation during the warm, growing season (April through September) is characterized by convective storms that generally form in advance of an eastward moving cold front or during periods of local atmospheric instability. Occasionally, tropical cyclones will move up from southern coastal areas and produce large quantities of rain. Both types of storms typically are characterized by relatively short periods of intense precipitation that produce large amounts of surface runoff and little recharge (Comell, Date Unknown).

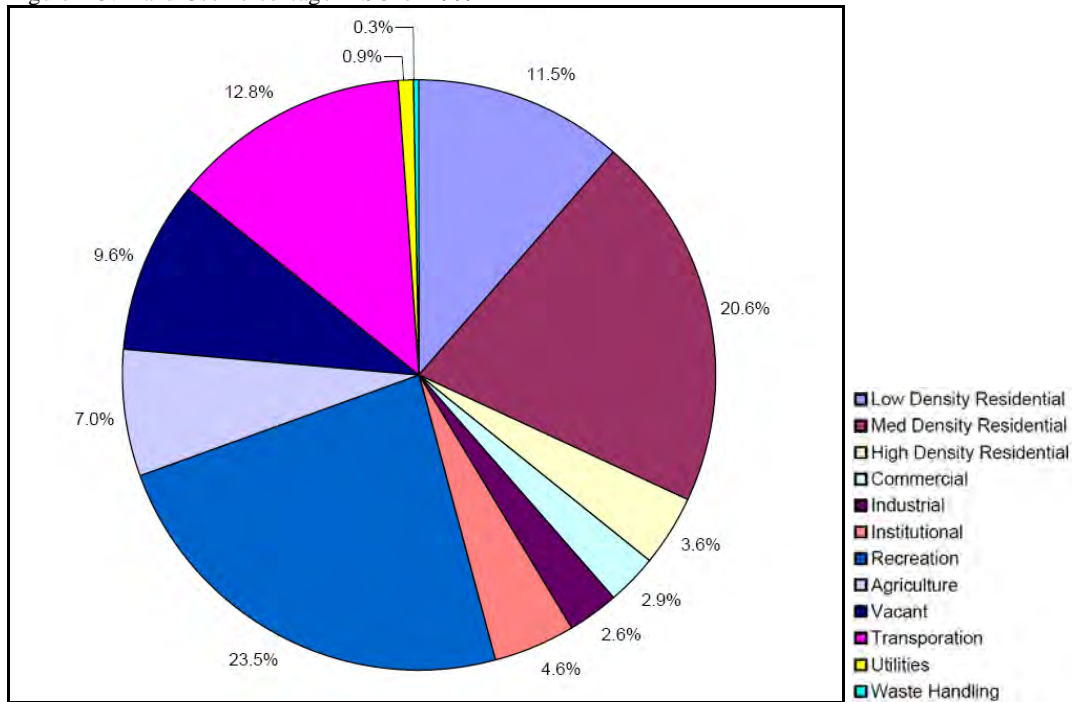

The cool season (October through March) is characterized by large, low-pressure systems that move northeastward along the Atlantic coast or the western side of the Appalachian Mountains. Storms that form in these systems are characterized by long periods of steady precipitation in the form of rain, snow, or ice, and tend to produce less surface runoff and more recharge than the summer storms because they have a longer duration and occasionally result in snowmelt (Comell, Date Unknown).

Long Island's climate is similar to other coastal areas of the Northeast. Summers are typically warm, with an occasional thunderstorm. Sea breezes off the Atlantic Ocean temper the heat and limit the frequency and severity of thunderstorms. During the winter, temperatures are usually warmer than inland areas, sometimes bringing rain instead of snow. Measurable snow falls every winter, including Nor'Easters which produce blizzard conditions. These Nor'Easters can bring one to two feet of snow with near-hurricane force winds (LongIsland.com, Date Unknown).

Land Use and Land Cover

Land uses in SC include: low density residential, medium density residential, high density residential, commercial, industrial, institutional, recreation and open space, agriculture, vacant, transportation, utilities, and waste handling. According to data provided by the SC Department of Planning, 23.5 percent of the land in SC was used for recreational purposes, 20.6 percent for medium density residential, 12.8 percent for transportation, 11.5 percent for low density residential, 9.6 percent for vacant land, 7 percent for agriculture, 4.6 percent for institutional, 3.6 percent for high density residential, 2.9 percent for commercial, 2.6 percent for industrial, 0.9 percent for utilities, and 0.3 percent for waste handling (Figure 4-3) (SC Department of Planning, 2000 and 2007).

Government

The counties of NYS began as entities established by the State Legislature to carry out specified functions at the local level on behalf of the State. During the 20th century, county government in NYS underwent major changes in function, form, and basic nature (SC Department of Planning, 2007).

Today, the counties of NYS are no longer a subdivision of the state that primarily exists to perform state functions. Counties are now a municipal corporation with geographical jurisdictions, home rule powers and fiscal capacities to provide a wide range of services to their residents. To some extent, counties have evolved into a form of "regional" government that performs specified functions and which encompasses, but does not supersede, the jurisdictions of cities, towns and villages within its borders (SC Department of Planning, 2007).

County Charter

Until 1960, SC consisting of the ten towns of Babylon, Brookhaven, East Hampton, Huntington, Islip, Riverhead, Shelter Island, Smithtown, Southampton, and Southold, was governed by a Board of Supervisors, with each town represented by its elected supervisor. This Board was responsible for County business, and each supervisor was accountable for the affairs of their individual town government. In 1954, the Board of Supervisors appointed a committee to study alternative forms of government for the rapidly growing County. After several attempts to write a charter in 1956 and 1957 proved unsatisfactory, a group of citizens formed the SC Citizens Charter Committee in the summer of 1957. The document that was drafted became the basis for the Charter approved SC voters in 1958. Approval by the NYS Legislature followed, and the Charter went into effect on 1 January, 1960. The 1960 Charter provided for a new administrative officer, the County Executive, while retaining the Board of Supervisors as the legislative body. County administration was centralized and streamlined, and a County police department was created (SC Department of Planning, 2007).

In 1967, the Board of Supervisors enacted resolutions establishing the SC Charter Revision Commission, a group of private citizens appointed by the presiding officer of the Board of Supervisors and the County Executive. The Commission was to update the Charter so that it would meet the needs of the rapidly expanding County. The U.S. Supreme Court mandated, in 1968, that the one-man one-vote principle be applied to the County government. Therefore, the Charter Revision Commission proposed the apportionment of the County into 18 districts of equal population, and the election of one representative from each of the districts to constitute the County Legislature, replacing the Board of Supervisors (SC Department of Planning, 2007).

Other important revisions accepted by the voters in 1970 included delineated and separated functions of the County Legislature and County Executive and changes in the budget and capital programs. With voter approval of the Environmental Preservation Act in 1970, it became the County's basic policy to conserve and protect its natural resources, the quality of its environment, and its natural scenic beauty, to encourage conservation of its agricultural lands, and to acquire land and waters for the County nature preserves and Historic Trust. Amendments in 1976 and subsequent years have updated this act (SC Department of Planning, 2007).

In 1972, voters approved an amendment that gave the County Planning Department the power to review and approve or deny zoning changes, variances, special permits or subdivision plans on property within 500 feet of the shoreline. In addition to those Amendments, every Local Law that is passed becomes part of the Charter. The *Laws of Suffolk County* includes the Charter, Administrative Code, Local Laws, Acts, Resolutions, Rules and Regulations, and Codes (SC Department of Planning, 2007).

Executive Branch of County Government

Eligibility and Terms of Office

The County Executive is the chief administrative officer of County Government and is elected directly by the voters of SC. The term of office is 4 years, from and including the first day of January following election. The County Executive must: (1) be a citizen of the U.S.; (2) be a resident of the County for at least one year prior to election; (3) reside in SC during the entire term of office; and (4) devote full time to the office (SC Department of Planning, 2007).

The Governor of New York State may remove the County Executive from office in accordance with New York State Law. A vacancy in the office of the County Executive is filled by special election within 90 days after the vacancy occurs. The Chief Deputy County Executive becomes Acting County Executive, serving in the interim with full powers, should the office of the Executive become vacant (SC Department of Planning, 2007).

Appointments

The County Executive has the power to appoint Deputy County Executives, who assist the Executive with major responsibilities. The County Executive designates one deputy, typically the Chief Deputy, to perform the administrative duties of the County Executive during their temporary absence or disability. If the Office of the County Executive becomes vacant other than by expiration of the term, the Chief Deputy shall become Acting County Executive with the full powers of the office until the vacancy is filled. Legislative approval is not required for Deputy appointments. Additionally, the County Executive appoints the majority of the County's departmental directors and members of County boards and commissions, some with and some without SC Legislature approval (SC Department of Planning, 2007).

Duties

The County Executive serves as budget officer of the County, and is responsible for the preparation and submission of an annual Operating Budget, a Community College Budget, and a three-year Capital Budget and Program (SC Department of Planning, 2007).

The County Executive reports to the County Legislature annually, at the close of the fiscal year (January 1-December 31), on the financial and other affairs of the County. The County Executive may submit legislation to the County Legislature for review and approval and, as Executive Officer, has the power to veto resolutions. The County Executive is charged with ensuring that Federal and State laws applicable to the County, as well as local laws and resolutions of the County, are enforced (SC Department of Planning, 2007).

Local Laws and Resolutions

No County law or resolution may take effect until it has been submitted to the County Executive for approval; if approved, it is then considered to be adopted. The County Executive may veto and return a local law to the County Legislature with a statement of reasons for not approving it. If not returned to the Legislature within 30 days, it becomes law. The County Legislature can over-ride an Executive veto by a vote of two-thirds of the Legislature.

Legislative Branch of County Government

Background

The SC Legislature was established in January 1970 in response to the U.S. Supreme Court's "one-man, one-vote" decision, replacing the 200-year-old Board of Supervisors. On the Board of Supervisors, the Supervisor of each of the County's 10 towns had one vote. With the establishment of the SC Legislature, the County was divided into 18 Legislative Districts, having substantially equal populations. Each Legislative District elects one member to the Legislature every two years. The SC Charter provides that, after each census, the boundaries of the Legislative Districts be re-drawn, if necessary, to maintain a substantially equal distribution of population (SC Department of Planning, 2007).

Qualifications of Legislators

To qualify as a legislator, one must (1) be a citizen of the U.S., (2) be a resident of SC for at least one year immediately preceding the election, and (3) reside in the district represented at the time of the nomination and throughout the entire two-year term of office. The exception to these qualifications would come in a year when redistricting took place. A sitting legislator who is redistricted out of their district could run for reelection, but would have to establish a permanent residence in the new district prior to running in the next general election. Other qualifications are determined by the Legislature and are subject to judicial review. In the case of a vacancy, a special election will be held within 90 days to fill the vacancy. Mayors of villages, supervisors of towns and members of the legislative bodies of towns and villages are not eligible to serve as members of the SC Legislature (SC Department of Planning, 2007).

Power

The SC Legislature has the power to (1) organize and alter County government in accordance with the SC Charter; (2) adopt local laws and regulations for the residents of SC; (3) make appropriations, levy taxes and incur debts; (4) investigate the functioning of government; and (5) fix their own salaries. The Legislature approves the County Executive's major administrative appointments and has certain appointment powers of its own (SC Department of Planning, 2007).

Presiding Officer

The Presiding Officer presides over and acts as Chair of all meetings of the Legislature and is empowered to call special sessions of the Legislature. The Presiding Officer also assigns each resolution or local law to a Standing or Special Committee of the Legislature for its review. It is the Presiding Officer's exclusive responsibility to set up the various committees of the Legislature, to define each committee's responsibilities, and appoint each committee's members and chairperson. The number of committees, their responsibilities, and chairpersons may change yearly (SC Department of Planning, 2007).

Legislative Committees

In 2000, the following legislative standing committees were named: (1) Ways and Means; (2) Health; (3) Social Services; (4) Budget; (5) Veterans and Seniors; (6) Consumer Affairs and Government Operations; (7) Finance, Technology and Management Services; (8) Energy and Environment; (9) Economic Development and Education; (10) Parks, Land Acquisitions, Cultural Affairs; (11) Public Safety; (12) Public Works and Transportation. These committees may change annually (SC Department of Planning, 2007).

The Chair of each committee is appointed by the Presiding Officer. Each standing committee is generally composed of seven members. Although committee assignments are made by the Presiding Officer, a legislator may request assignment to a particular committee. Most standing committees meet at least once a month. Special committees are appointed by the Presiding Officer as deemed necessary, serving only for time necessary to complete their work (SC Department of Planning, 2007).

Historic Timeline

Table 4-2 below displays the historic timeline of SC.

Table 4-2. Historic Timeline of SC

Year	Historic Event
1665	"Hempstead Convention" combines Long Island and Staten Island into a shire, called Yorkshire, thus ending Connecticut's jurisdiction over the area.
1683	SC is organized as one of the 12 original counties in the Province of New York.
1683	SC towns send representatives to the first Provincial Assembly, which adopts the "Charter of Liberties and Privileges," laying the foundation for the State's present political subdivisions and governmental structure.
1777	SC representatives participate in founding NYS.
1778	Act of State Legislature provides for annual meeting of Supervisors of a county to apportion county court expenses among the towns. This is the origin of the Board of Supervisors.
1829 to 1838	State laws are passed giving specific powers to a Board of Supervisors, leading to development of the Board into a local government with legislative and administrative functions.
1938	State Constitution permits counties outside New York City to draft and adopt their own charters subject to the approval of voters.
1954	Board of Supervisors appoints committee to study alternative forms of government for SC.
1958	SC Charter is drafted and ratified by County voters.
1959	SC elects its first County Executive, H. Lee Dennison.
1960	SC Charter goes into effect and first County Executive takes office.
1967	Board of Supervisors establishes the SC Charter Revision Commission.
1970	SC legislative body is changed from 10-person Board of Supervisors to County Legislature with 18 representatives – one elected from each of the County's new Legislative Districts, with a County Executive elected at-large.
1979	Local Law enacted provides for voter initiative to change County Law through the ballot. To date, this provision of the Law has never been used.

POPULATION AND DEMOGRAPHICS

According to the 2000 U.S. Census, SC had a population of 1,419,369 people. This is in exact agreement with the data included in HAZUS-MH which is based on the 2000 Census data. Table 4-3 presents the population statistics for the County based on the 2000 Census data. While it is recognized that the population of SC has increased significantly, and that this growth is not geographically uniform throughout the County, it is believed that the 2000 U.S. Census data within HAZUS-MH is sufficient and appropriate to support the risk assessment and mitigation planning efforts of this project. Further, considerations of long-term growth and seasonal population fluctuations are addressed in later parts of this subsection.

DMA 2000 requires that HMPs consider socially vulnerable populations. These populations can be more susceptible to hazard events, based on a number of factors including their physical and financial ability to react or respond during a hazard and the location and construction quality of their housing. This HMP considers two socially vulnerable population groups: (1) the elderly (persons over the age of 65) and (2) low-income (household annual income below \$20,000 per year).

Note: Pop. = Population

* Family poverty status not available; individual poverty status used.

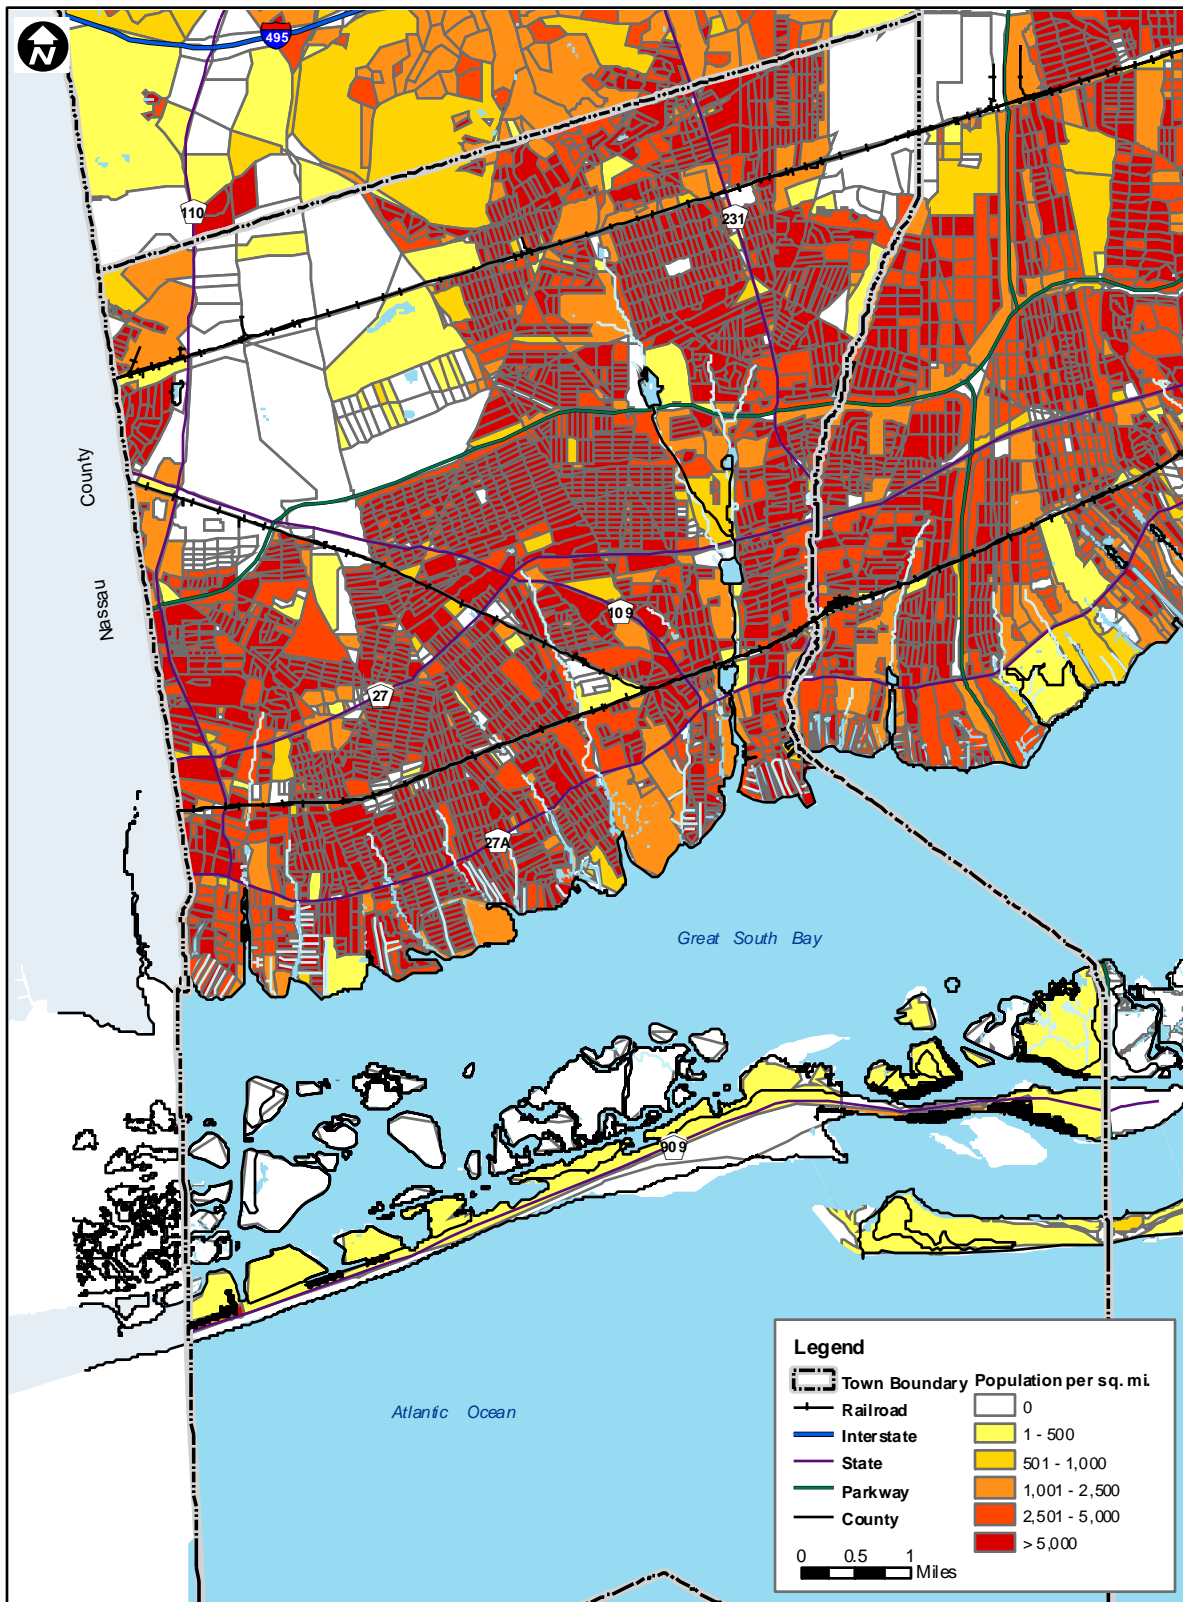

** Individuals with an income less than \$20,000 per year divided by the average number of people in a household in SC (3.938).

SC is one of the most populated counties in NYS, ranked 4th out of the 62 counties for population density, with an average density of 1,556 per square mile (2000 U.S. Census Bureau). According to the 2000 Census, SC included 167,558 persons 65 years of age and above (11.8% of total population). The 2000 U.S. Census data indicates a total of 83,171 persons living in households below the poverty level (6%).

According to the SC Department of Planning, the population density of SC was 1,611 persons per square mile in 2004. The ten towns of SC vary in population size and density. Huntington, Babylon, Smithtown, Islip, and Brookhaven, located in western SC, contain 91 percent of the County's population; yet only cover 62 percent of SC. The population density for western SC, in 2004, was 2,362 persons per square mile. In eastern SC, the population density is only 387 persons per square mile (SC Department of Planning, 2005). With the predicted population increase, residential land use will increase, while other land uses, such as vacant land and agriculture land, may decrease over time.

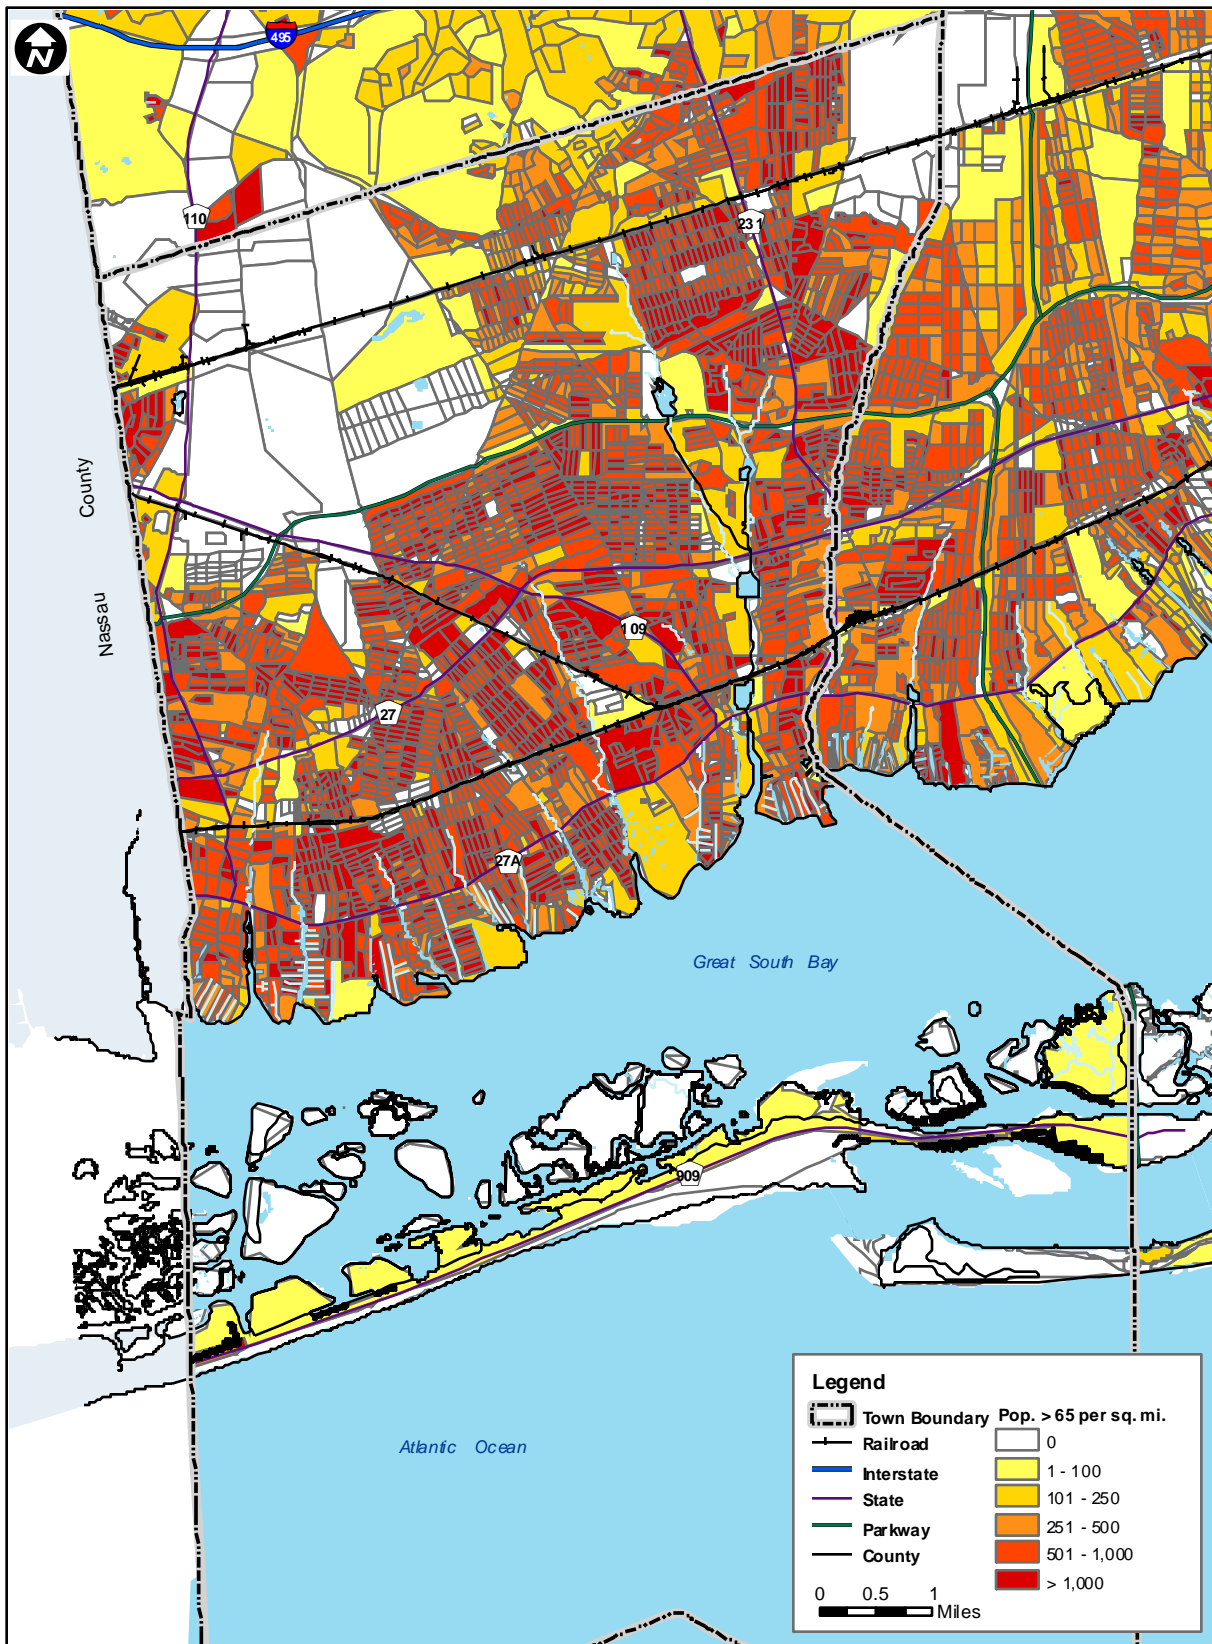

Figures 4-4 through 4-24 show the distribution of the general population density (persons per square mile) by Census block, elderly population density by Census block, and low-income population density by Census block in SC. These figures are organized by participating town.

Seasonal Population

Eastern SC is comprised of the towns of Riverhead, Southold, Shelter Island, Southampton, and East Hampton. The population of eastern SC substantially increases during the summer months due to miles of coastline, the presence of seasonal homes, and tourism. The SC Department of Planning has calculated peak seasonal population estimates for all of the eastern SC communities and several other communities. These five towns have approximately 30,000 seasonal homes, which add over 136,000 residents to the year-round population. In addition, seasonal guests in year-round homes are estimated at 44,000; campers total 4,800; and lodging occupants total 21,000 at peak. The overall seasonal population adds almost 208,000 people to the year round population during the summer season (July-August) (SC Department of Planning, Date Unknown).

During the summer season, the seasonal population increase differs dramatically among the five towns. In East Hampton, the peak seasonal population is estimated to be 3.5 times larger than the year-round population. East Hampton's population increases 351% from 20,347 to 91,768. Of all the villages and hamlets that makeup East Hampton, the hamlet of Napeague experiences the most dramatic increase in its seasonal population, from a year round population of 225 to 3,541 residents during the summer. The hamlet of Montauk has more seasonal homes and much more lodging than any other single community in East Hampton. Overall, East Hampton experiences the largest seasonal population increase out of all the eastern SC towns (SC Department of Planning, Date Unknown).

Shelter Island's seasonal population increase is the second largest, at 299%. It increases from 2,301 year round to 9,171 during the summer season. Southampton has a large number of seasonal homes, causing its seasonal population to increase by 155%, from 56,923 to 145,382 persons. The North Fork, which includes Southold and Riverhead, has relatively fewer seasonal homes which makes the estimated increases not as dramatic. In Southold, the population increases by 133%, from 21,015 to 49,052 persons. Riverhead is becoming more of a year-round community and its seasonal population only increases by 45%, from 28,862 to 41,951 during peak seasonal times (SC Department of Planning, Date Unknown).

Seasonal population estimates were also prepared for Fire Island and selected other Nassau-Suffolk communities. The most dramatic increase of any up-island area occurs in Fire Island, which has 323 year-round residents and an estimated 17,000 people at peak seasonal times. Other significant increases occur in the Fire Island incorporated villages of Ocean Beach and Saltaire (SC Department of Planning, Date Unknown).

Other Nassau-Suffolk communities, such as Long Beach, Mastic Beach, and Rocky Point contain some seasonal homes. However, since these communities are primarily year-round in nature, some of the additional seasonal population in those communities is offset by year round residents vacationing elsewhere during those same peak times (SC Department of Planning, Date Unknown).

In most communities, seasonal population results primarily from seasonal homes. This is particularly true in such communities as Bridgehampton, North Sea, Sagaponack, Fishers Island, and Fire Island. In Montauk, however, motels account for much of the seasonal population. In other communities, seasonal guests in year-round homes comprise much of the seasonal population (SC Department of Planning, Date Unknown).

Long Island's seasonal home concentrations continue to move eastward. The proportion of Long Island's seasonal homes located in the five eastern towns continues to increase, and the number of seasonal homes in eastern SC has noticeably risen during the past 30 years. Most of the original seasonal homes in Nassau and western SC have been converted to use year-round. As recently as 1970, significant seasonal home concentrations existed in Long Beach, Atlantic Beach, Ronkonkoma Sound Beach, Rocky Point, Wading

River, Shirley, and Mastic Beach. By 1990, the seasonal home concentrations in these communities had become much less significant (SC Department of Planning, Date Unknown). Table 4-4 shows the seasonal population in 1990 and 2000 for the five eastern SC towns. Table 4-5 shows the number of seasonal homes in 1990 and 2000 for the five eastern SC towns.

Table 4-4. Eastem SC Total Seasonal Population Data for 1990 and 2000

Jurisdiction	Seasonal Population in 1990	Seasonal Population in 2000	Seasonal Population Increase*	% Increase in Seasonal Population*

GENERAL BUILDING STOCK

The 2000 Census data identifies 469,299 households in SC. The Census data identifies 522,323 housing units in SC in 2000, an increase of 10.5% from 1990. Census defines household as all the persons who occupy a housing unit, and a housing unit as a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters. Therefore, you may have more than one household per housing unit. The median price of a single family home in SC was estimated at \$185,200 by the 2000 U.S. Census.

The data in HAZUS-MH estimates that there are 461,871 structures in SC, with a total building replacement value (structure and content) of greater than \$210 billion. Approximately 99% of the buildings and 84% of the building stock structural value are associated with residential housing. Table 4-6 presents Building Stock Statistics by Occupancy Class for SC, based on HAZUS-MH provided data.

Table 4-6. Building Stock Count and Replacement Value by Occupancy Class

Source: U.S. Census 2000 data provided by HAZUS-MH (2005).

Note: RP = Replacement value. The values for the town include the building stock for their village(s). Exposure value reflects the replacement cost for building structure and contents. Generally, contents for residential structures are valued at about 50 percent of the building's value. For commercial facilities, the value of the content is generally about equal to the building's structural value.

*Shelter Island indicated they have 50-60 commercial buildings in their town.

The 2000 Census identified that the majority of housing units (85.8%) in SC are single family detached or attached units. The 2002 U.S. Census Bureau's County Business Patterns data identified 45,532 business establishments employing 536,790 people in SC. The majority (62%) of these establishments employed between one and four employees.

There are certain limitations to using HAZUS-MH. This plan utilized HAZUS-MH default data to perform a HAZUS-MH Level 1 analysis. HAZUS-MH is only intended to provide an estimation of building replacement value, using estimates for typical buildings in a given census block. It is only as current and/or accurate as the US Census 2000 data, and it does not reflect specific local building conditions, such as a higher percentage of luxury structures, higher local costs to procure and transport building materials through New York City, and the recent dramatic worldwide increases in the cost of building construction materials and products and/or services dependent upon the price of petroleum. Plan participants have indicated the values presented herein significantly underestimate the actual Replacement Cost Values (RCV) in Suffolk County.

Table 4-7 has been provided to help illustrate the County's concern that the general building stock provided with the HAZUS-MH software underestimates the actual building inventory. This table compares the residential, commercial and industrial building counts provided with HAZUS-MH to those obtained from Suffolk County and local tax assessment databases. It is noted that neither dataset being compared is sufficient to provide a strict quantitative analysis of the shortfall in the HAZUS-MH data; rather it provides qualitative support of this belief. HAZUS-MH building counts are estimates derived from total square footage amounts and default average structure sizes. The counts provided from the County and local assessor sources show the number of parcels within specific building classes.

Source: Suffolk County Treasurer's Office; HAZUS-MH

Note: The values for the town include the building stock for their village(s), with the exception for the Town of Smithtown. The Town of Smithtown building stock counts do not include the villages within town boundaries.

*Provided by the Town of Huntington.

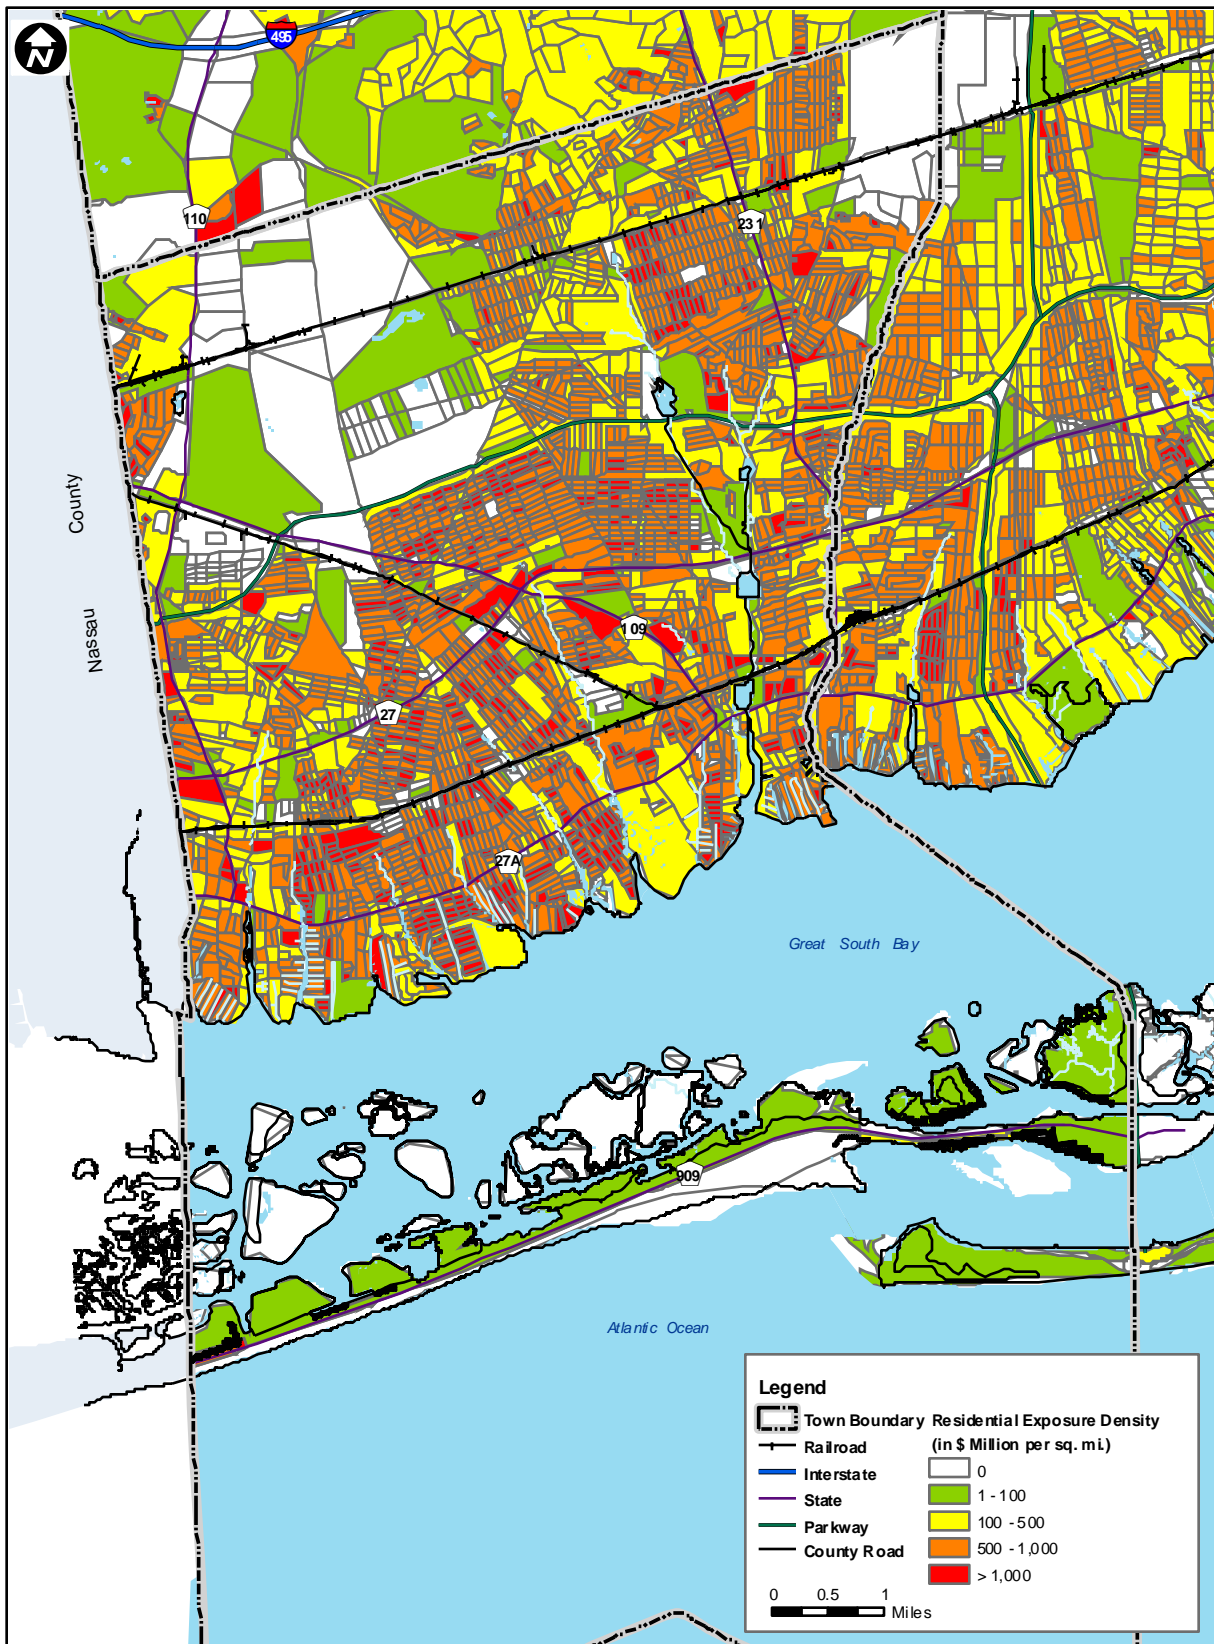

**Based on the most recent land use inventory (November 2007) as provided by the Smithtown Planning Department.

Figure 4-25 through Figure 4-45 show the HAZUS-MH default distribution and exposure density of residential, commercial and industrial buildings in SC organized by participating jurisdictions. Exposure density is the dollar value of structures per unit area, including building content value. Generally, contents for residential structures are valued at about 50 percent of the building's value. For commercial facilities, the value of the content is generally about equal to the building's structural value. The densities are shown in units of \$1,000,000 (\$M) per square mile.

HAZUS-MH indicates there are 5,001 mobile homes located in SC, which compares relatively closely with 2000 U.S. Census data (5,374). Manufactured homes include trailer homes and trailer homes can be more susceptible to hazard event damages. Limited County-wide information was received regarding the location of mobile homes in all jurisdictions. Therefore, Figure 4-46 illustrates the distribution of mobile homes in SC, a subset of the residential building class in HAZUS-MH.

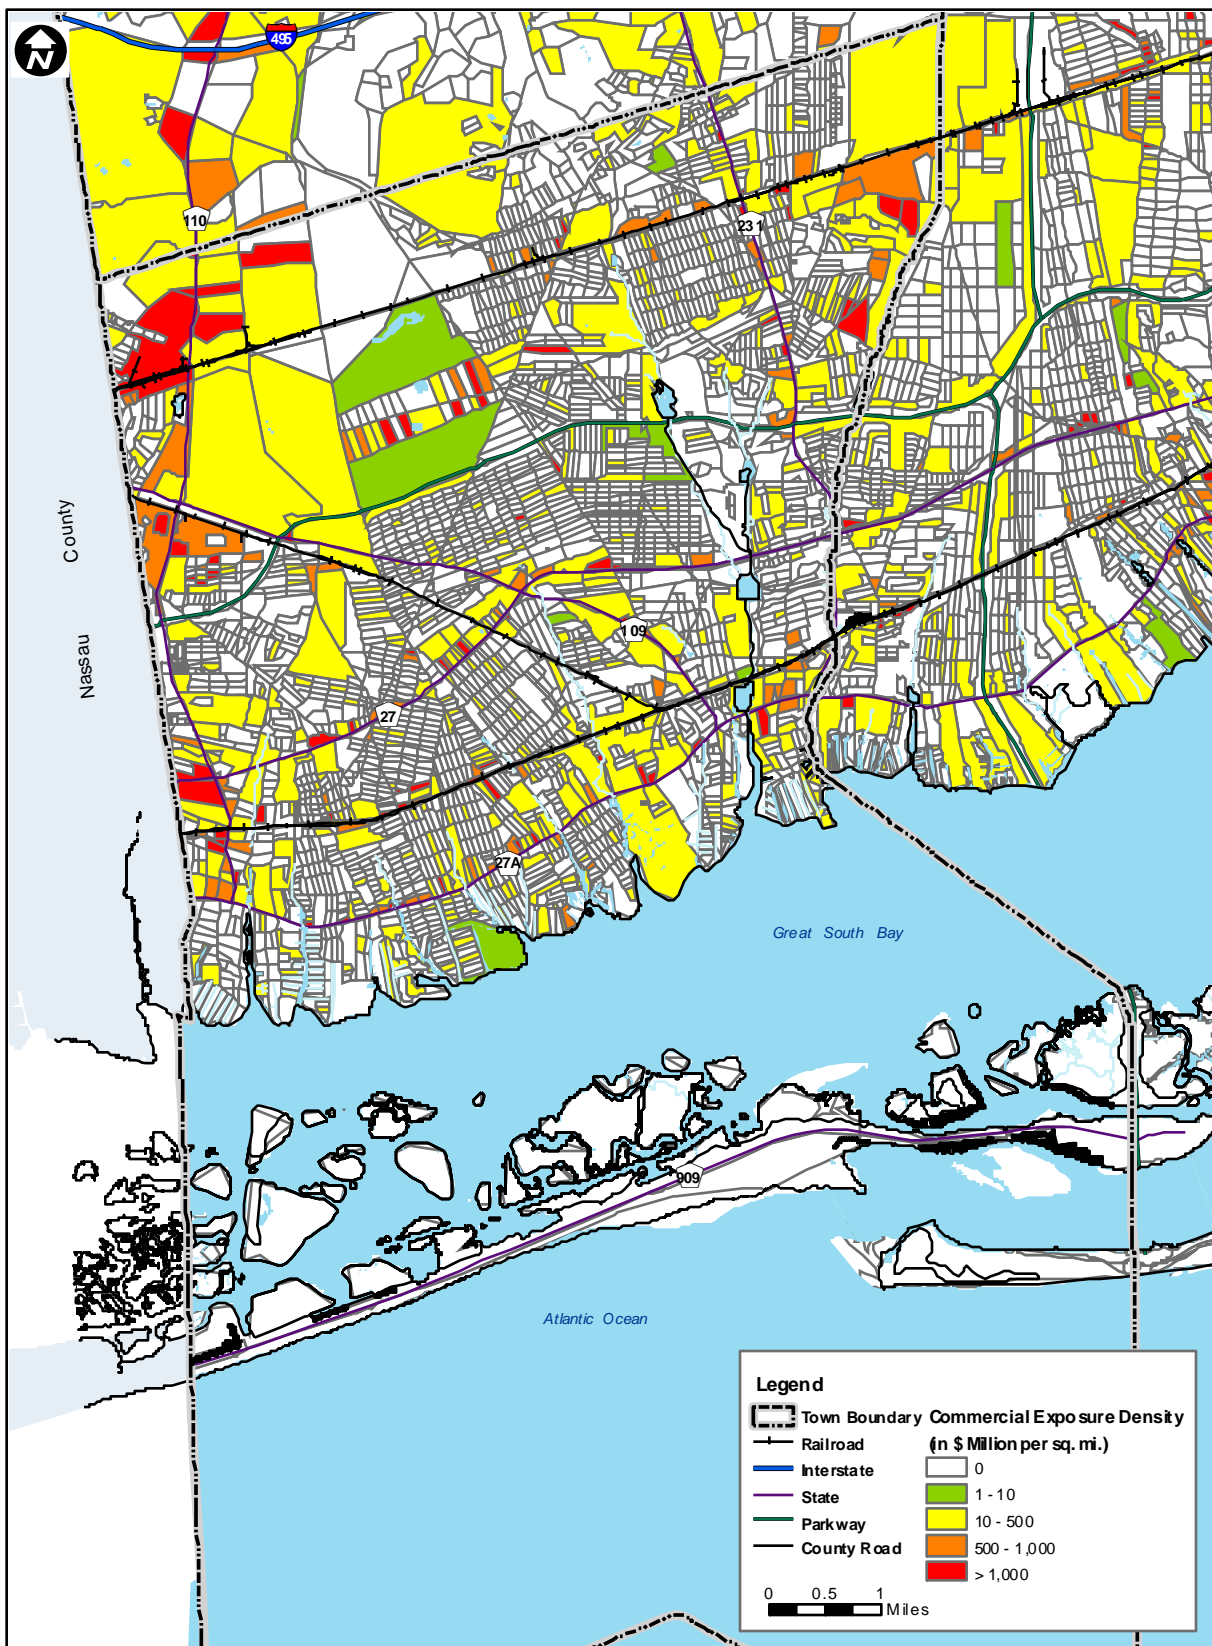

Viewing exposure distribution maps such as Figures 4-25 through 4-45 can assist communities in visualizing areas of high exposure and in evaluating aspects of the study area in relation to the specific hazard risks.

LAND USE AND POPULATION TRENDS

In NYS, land use regulatory authority is vested in towns, villages, and cities. However, many development and preservation issues transcend local political boundaries. In SC, each town and village is empowered by the Municipal Home Rule Law to plan and zone within its boundaries (SC Department of Planning, 2000). DMA 2000 requires that communities consider land use trends, which can impact the need for, and priority of, mitigation options over time. Land use trends can also significantly impact exposure and vulnerability to various hazards. For example, significant development in a hazard area increases the building stock and population exposed to that hazard.

This Plan provides a general overview of population and land use trends and types of development occurring within the study area. An understanding of these development trends can assist in planning for further development and ensuring that appropriate mitigation, planning, and preparedness measures are in place to protect human health and community infrastructure.

Land Use Trends

According to the SC Department of Planning, land use is categorized as low density residential, medium density residential, high density residential, commercial, industrial, institutional, recreational and open space, agriculture, vacant, transportation, utilities, and waste handling. Open space, vacant land, commercial, industrial, and agricultural land uses are further discussed below.

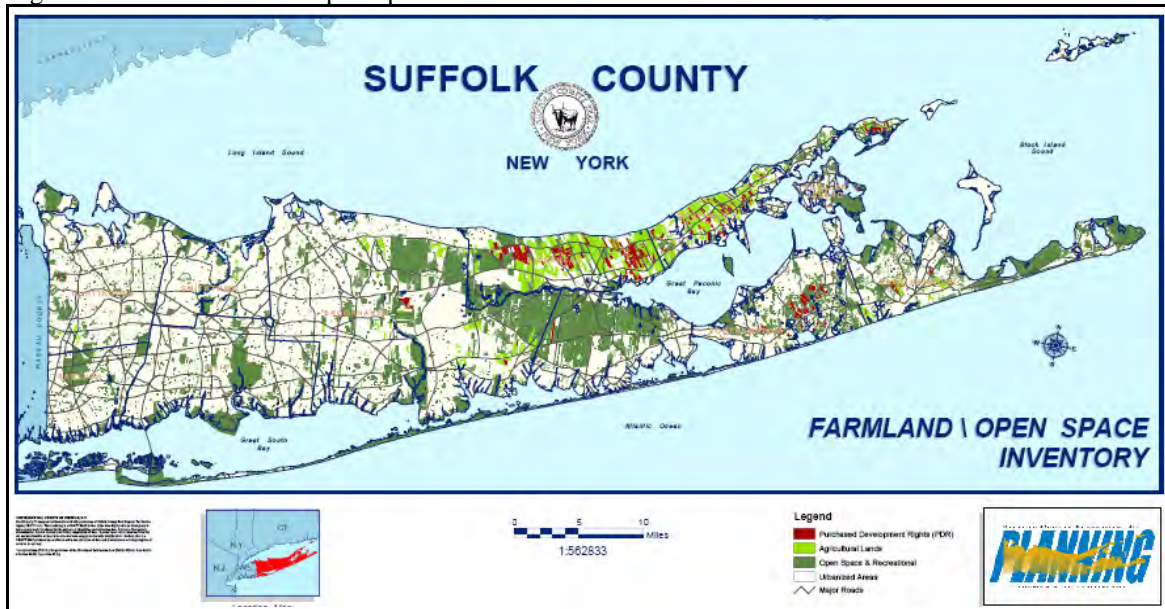

Over the last 15 years, there has been a reduction in the amount of vacant and agricultural land and increases in the amount in all other land use categories. If vacant land, agricultural land, and land used for recreation, conservation and open space is excluded, all of the other land uses only account for half of the property on Long Island. Therefore, only half of Long Island can be classified as developed (Long Island Regional Planning Board, 1982).

Most commercial and industrial development is concentrated near North Amityville, Deer Park, and Ronkonkoma with considerable development along the Long Island Expressway in communities such as Melville and Hauppauge. There are a number of wetland areas and significant water bodies, which include the Atlantic Ocean, Long Island Sound, Great South Bay, and Great Peconic Bay. The largest wetland areas are in the Connetquot River State Park Preserve, along the Camans River, in Makamah County Nature Preserve and in Conscience Point National Wildlife Refuge.

Open Space

Per the SC Department of Planning, open space includes forests and agricultural land, undeveloped shorelines, undeveloped scenic lands, public and private parks, and preserves. It also includes water bodies, such as bays, lakes, and streams (SC Department of Planning, 2005). In 2000, open space covered 23.4% of SC land (Long Island Index, 2004). With a rapid population growth, there is a demand for open space preservation, which will continue to support the tourist industry and water quality in SC (Newsday.com, 2007). In 1999, 83,000 acres of land in the five eastern SC jurisdictions were available for development. In western SC, there was far less land available for open space acquisitions, which makes it critical to acquire any such land before SC is completely built-out. According to the document “Open Space Acquisition Policy Plan for SC”, prepared by the Department of Planning, with present funding levels, SC has the ability to purchase thousands of acres for open space preservation (SC Department of Planning, 2007).

Figure 4-47. Farmland and Open Space in SC

Source: SC Department of Planning, 2003

Vacant Land

In 2006, vacant, undeveloped land comprised 12 percent (69,740 acres) of land use in SC (SC Fire, Rescue and Emergency Services, 2006). Vacant land includes any undeveloped residential lots and land. It also includes abandoned agricultural land and rural land, vacant land in commercial areas, vacant land in industrial areas, urban renewal or slum clearance, and private and wild forest lands (SC Department of Planning, 2004).

Commercial Land

In 2006, commercial properties comprised approximately 6.2 percent (36,013 acres) of SC (SC Fire, Rescue and Emergency Services, 2006). These commercial properties include hotels and motels; camps, cottages, and bungalows; inns, lodges, rooming houses, etc.; dining establishments; motor vehicle services; retail services; bank and office buildings; entertainment businesses; sports assemblies; amusement facilities; indoor and out sports facilities; marinas; resort complexes; and professional associations (SC Department of Planning, 2004). SC contains more than 22 million square feet of private office buildings, with a proposed 2.4 million of additional square feet to be added in the future. With such extensive industrial, office, and tourist markets, hotels, motels, and bed and breakfast inns can be found throughout SC. Currently, SC has 304 hotels and motels, which contain over 11,600 rooms. In 2001, Long Island had a total of \$42 billion in retail sales, which ranked third among the nation's 20 largest metropolitan areas. Due to SC's relatively high income, high retail sales levels, and population density, many retailers are drawn to the area. Shopping centers total 37 million square feet, with 8 million square feet of retail space in downtown centers.

Industrial Land

Industrial properties comprised only 0.6 percent (3,209 acres) of land use in SC for 2006 (SC Fire, Rescue and Emergency Services, 2006). Industrial properties include storage, warehouse and distribution facilities; gasoline, fuel, oil, liquid petroleum storage and/or distribution; bottled gas, natural gas facilities; grain and feed elevators, mixers, sales, outlets; lumber yards, sawmills; coal yards, bins; cold

storage facilities; trucking terminals; piers, wharves, docks, and related facilities; junkyards; manufacturing and processing; mining and quarrying; and industrial product pipelines. The largest industrial park in SC is the Hauppauge Industrial park in Hauppauge. It encompasses 1,400 acres and 14 million square feet in size (SC Economic Development and Workforce Housing, 2000). This industrial park is home to 1,300 businesses and 55,000 employees, making it the largest such complex east of the Mississippi River and the second largest in the United States (Canavor, 2003).

Agricultural Land

In 2006, agricultural land made up 0.5 percent (2,870 acres) of SC (SC Fire, Rescue and Emergency Services, 2006). This percentage includes any productive agricultural vacant land, livestock and products, field crops, truck crops, orchard crops, nursery and greenhouses, and specialty farms (SC Department of Planning, 2004). In 2002, SC was the leading agriculture-producing county in NYS, with total sales of \$201 million, which is a 9.7 percent increase since 1997. The leading products sold included nursery and greenhouse, vegetables, poultry and eggs, fruits and nuts, and aquaculture (Figure 4-48) (NY Agricultural Statistics Service, 2003).

Figure 4-48. Leading Agricultural Products in SC for 2002

Source: NY Agricultural Statistics Service, 2003

Even though SC's agriculture sales have increased, SC has experienced a decrease in total farm acreage. In 2002, 651 farms (with 34,127 acres) were identified by the USDA, compared to 725 farms (with 35,858 acres) in 1997 (Office of the State Comptroller, 2006). Farmland acreage in SC is decreasing by 1,400 acres each year, due to population growth and demands for residential space (SC Department of Planning, 2005).

According to the New York Agricultural Statistics Service, in 2003 there were 34,000 acres in farms in SC, representing 6% of the County's total acreage. This included 645 farms averaging 53 acres per farm. SC ranks 27th in NYS for the number of farms and 50th for land (acreage) in farms (New York Agricultural Statistics Service, 2003). Over the last forty years, farmland in SC has decreased. This trend can be seen in Table 4-8 and Figure 4-49.

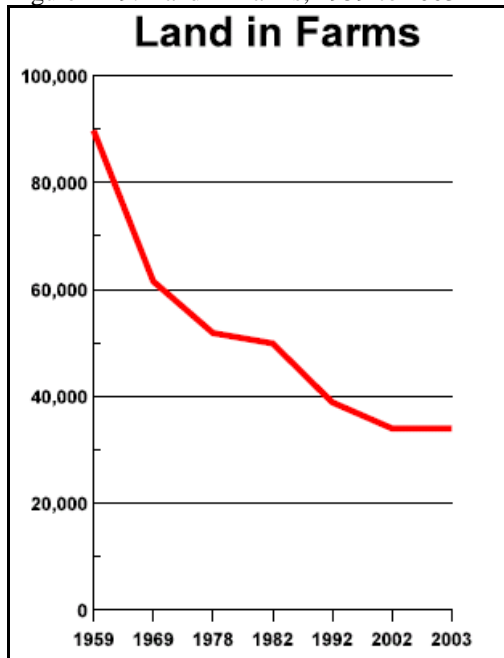

Table 4-8. Agricultural Land Use for 1940 to 2003

Year	Number of Farms	Lands in Farms (acres)	Total Cropland (acres)	Permanent Pasture (acres)	Total Woodland (acres)	Other Land (acres)
1940	2,344	119,016	NA	NA	22,790	NA

Year	Number of Farms	Lands in Farms (acres)	Total Cropland (acres)	Permanent Pasture (acres)	Total Woodland (acres)	Other Land (acres)

Population Trends

This section discusses population trends to use as a basis for estimating future changes that could result from the seasonal character of the population and significantly change the character of the area. Population trends can provide a basis for making decisions on the type of mitigation approaches to consider and the locations in which these approaches should be applied. This information can also be used to support planning decisions regarding future development in vulnerable areas.

In 1900, the U.S. Census placed SC's population at 77,582 and by 1920, its population reached 110,134. More than 20 years later, during World War II, residential construction came to a standstill. During this time, there were sizable shifts in population. These shifts were largely due to many people who had been mobilized into the Armed Forces. The end of the war brought demobilization and with that, many new

families started, leading to a post-war construction boom. Many areas on Long Island, including SC, saw a rapid increase in population. A steady increase in population was seen through the 1980s. Between 1980 and 1990, the population gain was small compared to previous years. By 1990 and into 2000, the population started to flourish once again. By January 1, 2006, the combined population of Nassau and Suffolk Counties totaled 2.85 million persons (LIPA, 2006).

Table 4-9 and Figure 4-50 depict the past, current, and project population statistics/trends for SC.

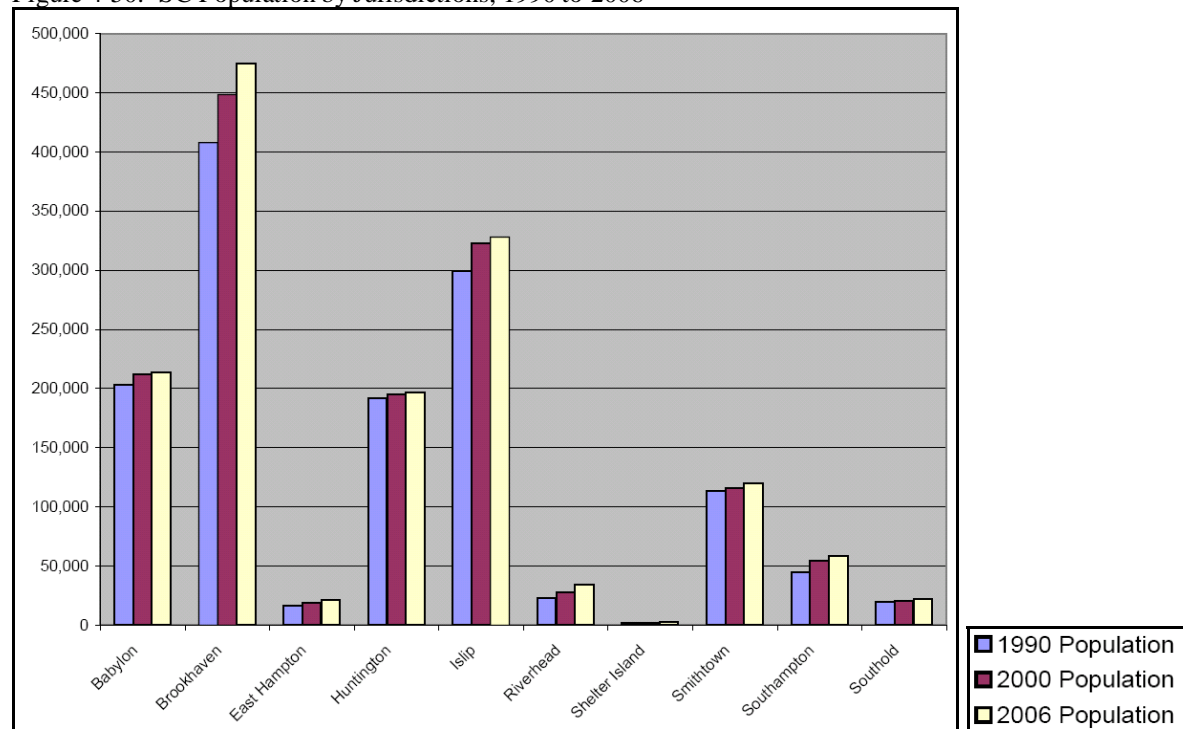

Table 4-9. SC Population by Jurisdictions, 1990 to 2006

Jurisdictions	1990 Population	2000 Population	2006 Population
Babylon	202,869	211,792	213,988
Brookhaven	407,779	448,248	474,438
East Hampton	16,132	19,179	21,254
Huntington	191,474	195,289	196,725
Islip	299,587	322,612	327,923
Riverhead	23,011	27,680	34,104
Shelter Island	2,263	2,228	2,441
Smithtown	113,406	115,715	119,917
Southampton	44,976	54,712	58,342
Southold	19,836	20,599	21,782
Suffolk County	1,321,864	1,419,369	1,469,715

Source: U.S. Census, 2006

Note: 2006 population is estimated by the U.S. Census.

Figure 4-50. SC Population by Jurisdictions, 1990 to 2006

Source: U.S. Census Bureau, 2006

The U.S. Census Bureau estimates the 2006 population for SC to be 1,469,715. This is an increase of 50,346 from the 2000 population. Every jurisdiction experienced an overall increase in their population

from 2000 to 2006. Brookhaven is SC's most populated jurisdiction, with a 2006 estimated population of 474,438. Riverhead experienced the greatest percent increase in its population (23.21%). Huntington saw the smallest increase in its population (0.74%).

Since 1952, LIPA has provided a Population Survey for Suffolk and Nassau Counties and the Rockaway Peninsula of Queens County. The Population Surveys are derived from U.S. Census data and utility records of active residential electric meters. The Survey contains the previous year's estimates as well as data from prior U.S. Censuses (LIPA, 2006).

LIPA's estimated population for SC, on January 1, 2006, was 1,495,697 persons. This total is 12,301 above the reported population in the 2005 Population Survey. Between 2005 and 2006, the County's ten jurisdictions all experienced population gains (LIPA, 2006).

Brookhaven accounted for 5,717 of the increase, to lead all jurisdictions in numerical growth and remain SC's most populated community with an estimated 485,295 residents. Islip, SC's second most populated jurisdiction experienced a growth of 1,482 persons, giving Islip a total of 332,484 residents. Babylon, with an estimated population of 217,061, grew by 1,338 persons. Huntington was SC's fourth most populated jurisdiction, experienced a growth of 1,271 residents. Riverhead's population increased by 1,070 since last year's estimates. Smithtown increased by 651 and Southampton by 312. Southold's population increased by 285 and East Hampton experienced a growth of 131 persons. Shelter Island, which is SC's smallest jurisdiction, added 44 residents to total 2,483 persons (LIPA, 2006).

The five western jurisdictions of SC include Huntington, Babylon, Islip, Smithtown, and Brookhaven. Together, they all experienced a net increase of 10,459 persons. These jurisdictions are now estimated to have a combined population of 1,357,212 persons. The County's five eastern jurisdictions, which include Riverhead, Southampton, Southold, East Hampton, and Shelter Island, added 1,842 persons. The combined population of the five eastern jurisdictions is estimated to be 138,485 persons as of January 1, 2006 (LIPA, 2006).

SC's population is projected to continue to increase moderately over the next twenty years. Between 2004 and 2030, the County's population is projected to increase by 19%. Out of all SC's ten communities, Riverhead is expected to increase by the largest percentage, followed in by Southampton, Southold, East Hampton, Shelter Island, and Brookhaven. The largest numerical increase is expected in Brookhaven (113,000) (SC Department of Planning, 2005).

Saturation population is the population which can be expected if all available land were to be developed according to existing zoning. The SC Department of Planning uses this to determine the future population of the County. It is estimated that SC's saturation population is 1.75 million persons, and may be approached starting around the year 2030. It is estimated that SC's population is on a projected upward trend (SC Department of Planning, 2005).

GROWTH AND DEVELOPMENT

According to “A Review of Selected Growth and Development Areas” for SC, five areas were identified by the SC Department of Planning and the New York Metropolitan Transportation Council as “major growth and development areas” in the County. These five areas are: 1) Route 110 Office-Industrial Corridor; 2) Sagtikos Regional Development Zone; 3) Yaphank; 4) Town of Riverhead; and 5) Stony Brook High Tech Campus (SC Department of Planning, 2006). Table 4-10 describes additional areas of major development (i.e., building and infrastructure), if any, identified by participating jurisdictions of this Plan.

Table 4-10. New Development Plans

Jurisdiction	Type	Location	Timeframe	Description/Status
Town of Babylon	The Route 110 Office-Industrial Corridor, located in northwestern Babylon, was identified as an area of major growth and development potential (SC Department of Planning, 2006). The Town of Babylon does not have any major subdivisions or infrastructures planned within the next five years that would impact mitigation planning.			
Village of Amityville	The Village of Amityville does not have any major subdivisions or infrastructures planned within the next five years that would impact mitigation planning.			
Village of Babylon	The Village of Babylon does not have any major subdivisions or infrastructures planned within the next five years that would impact mitigation planning.			
Village of Bellport	The Village of Bellport does not have any major subdivisions for residential/commercial development or major infrastructures planned within the next five years.			
Town of Huntington	The Route 110 Office-Industrial Corridor, located in southwestern Huntington, was identified as an area of major growth and development potential (SC Department of Planning, 2006).			
Village of Asharoken	One large parcel (the former Morgan property) remains undeveloped. The 440 acres has a potential to add 200 more residences to the Village.			
Village of Northport	The Village of Northport does not have any pending major subdivisions or major infrastructures planned within the next five years.			
Town of Riverhead	The Town of Riverhead was identified as an area of major growth and development potential (SC Department of Planning, 2006).			
Town of Shelter Island	Shelter Island is currently controlling development by purchasing open space.			
Town of Smithtown	Residential	Moriches Road, St. James	Next 2 years	Subdivision
	Residential	Route 347 and Route 111	Next 5 years	70 Townhouses; Zone change approved
	Residential (potential)	Indian Head Road and Ellen Place	Next 5 years	Not provided
	Residential	St. Johnland Road and Old Dock Road	Next 5 years	Retirement Community; Pending zone change
	Undetermined	Former Kings Psychiatric Center	> 5 years	Undetermined

Jurisdiction	Type	Location	Timeframe	Description/Status
	Undetermined	Route 25A and Mills Pond Road	> 5 years	Subdivision; Pending
Village of Head of the Harbor	Not provided	Evan Court	Next 5 years	3 lot subdivision; Approved
	Not provided	Carmen Lane	Next 5 years	Site plan; Approved
	Not provided	Pederson/Smith	Next 5 years	Site plan; Preliminary
	Not provided	Muffins Meadow	Next 5 years	5 lot subdivision; Approved
	Not provided	Krantz	Next 5 years	Dock; Preliminary
	Not provided	Sunset Drive	Next 5 years	Subdivision; Approved
	Not provided	Randall/Lecky	Next 5 years	Subdivision; Preliminary
	Not provided	Arbor Lane	Next 5 years	Site Plan; Preliminary
	Not provided	Thompson Lane	Next 5 years	Site Plan; Preliminary
	Not provided	Moseley	Next 5 years	Subdivision; Preliminary
	Not provided	Niss. Fams	Next 5 years	3 lot subdivision; Preliminary
	Not provided	Lot #26	Next 5 years	2 lot subdivision; Preliminary
Town of Southold	The following hamlets are identified as the main centers of residential development: Laurel, Mattituck, Cutchogue, New Suffolk, Peconic, Southold, East Marion and Orient.			

Source: Input from the SC Planning Committee or departments within their jurisdiction, unless otherwise noted.

CRITICAL FACILITIES

A comprehensive inventory of critical facilities in the County was developed from various sources including input from the Planning Committee, SC and participating municipal departments, utility companies, and HAZUS-MH provided data. The inventory of critical facilities presented in this section represents the current state of this effort at the time of publication of this HMP. The risk assessment results presented in Section 5 are based on Level 1 HAZUS-MH inventory data (provided with HAZUS-MH), enhanced where practical with local data provided by the County or participating jurisdictions. The profile data presented here will be updated in the final version of the HMP to include the best available inventory assembled from this ongoing effort.

Critical Facilities are those facilities considered critical to the health and well-being of the population and that are especially important following a hazard. As defined for this HMP, critical facilities include essential facilities, transportation systems, lifeline utility systems, high-potential loss facilities, and hazardous material facilities.

Essential facilities are a subset of critical facilities that include those facilities that are important to ensure a full recovery following the occurrence of a hazard event. For the County risk assessment, this category was defined to include police, fire, EMS, schools/colleges, shelters, senior facilities, and medical facilities.

Essential Facilities

This section provides information on emergency facilities, hospital and medical facilities, shelters, schools, and senior care and living facilities.

Emergency Facilities

Suffolk County Police Departments

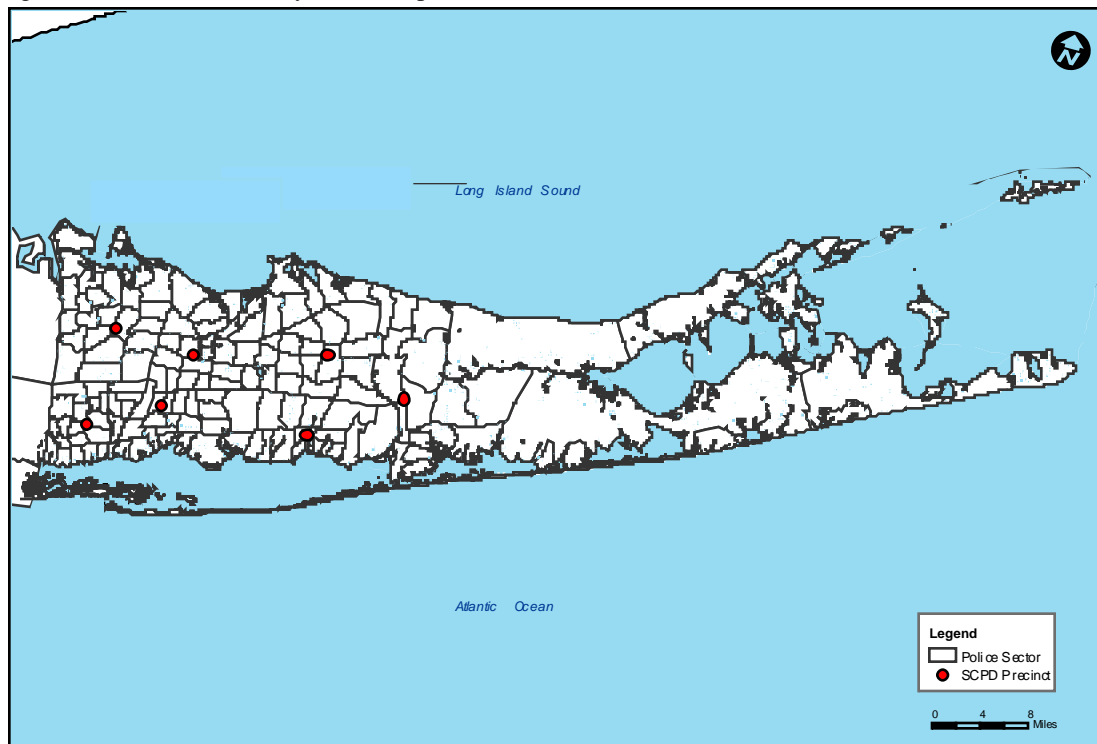

The Suffolk County Police Department (SCPD) is made up of over 2,500 sworn officers and 500 civilian members. The workforce is divided into seven (7) precincts that provide police services for the five (5) western towns in Suffolk County (Babylon, Brookhaven, Huntington, Islip and Smithtown). Each of the precincts provides all police services for their respective areas. A central police headquarters is located in Yaphank which provides administrative and support services to each of the seven precincts. The training of all police and law enforcement personnel in the county is provided and coordinated by the Suffolk County Police Department in county facilities in Brentwood.

In addition to the SCPD, law enforcement and police services are also provided by eight (8) incorporated villages within the five (5) western towns. Police services in the five (5) eastern towns of Suffolk County (East Hampton, Riverhead, Shelter Island, Southampton and Southold) are provided by eleven (11) independent town and village police forces that work in concert with each other and SCPD as required. The working relationships between all of the different police departments in Suffolk County ensures that the appropriate resources are directed where and when they are needed. The SCPD has the most capabilities of all of the police forces in the county and makes its resources readily available as particular needs are identified.

The SCPD has approximately 2,100 officers that are trained in EMT-D. It also possesses capabilities for aviation and Med-Evac services for the entire county. The county force has additional capabilities in a wide variety of areas which include, but are not limited to, emergency services, Haz-Mat requirements, bomb and explosive devices, marine and coastal beach requirements, canine functions, and coordinated regional criminal intelligence needs to name a few.

Figure 4-51 illustrates SCPD precincts and County and municipal police sectors (sectors are a subset of precincts).

Figure 4-51. Suffolk County Police Department Precincts and Police Sectors

Source: SC GIS

Suffolk County Fire Departments

Fire protection in SC is almost entirely provided by volunteers in 109 fire departments that operate under and are governed by an area fire district. Figure 4-51 illustrates the fire districts in SC. Typically, a fire district is run by five (5) publicly elected unpaid officials. Fire districts, similar to towns and villages, are a local form of government created pursuant to state statutes. They have the power and authority to provide fire protection services within their boundaries and to levy taxes and incur debt to accomplish that responsibility. One fire district has no higher authority over another nor can it be superseded in authority by a village, town, county or the state government.

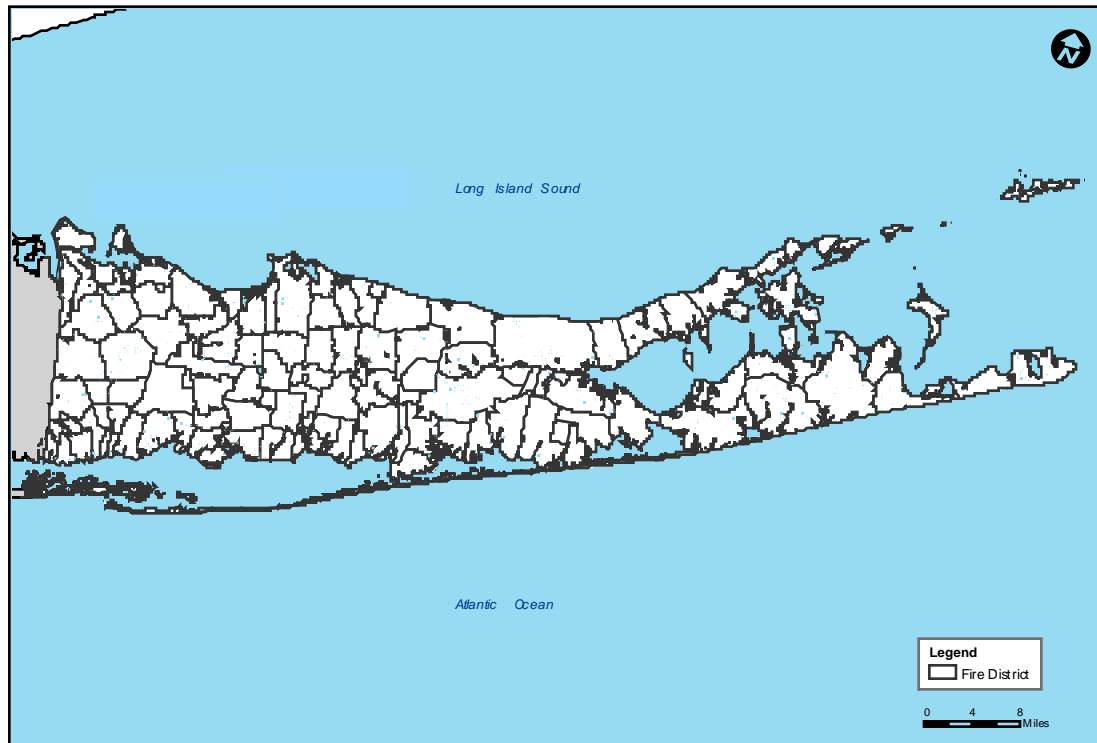

In addition to the volunteer departments there are several instances where fire protection service is provided by contract to a village or township, however this is not the norm in SC. Additionally, there are seven (7) unique career fire agencies that provide services to the three (3) state or local owned airports, the three (3) federal facilities and one (1) utility power station. Again this is not the norm in Suffolk County.

The latest estimates indicate that there are approximately 11,900 volunteer firefighters in SC that operate a combined 1,500 pieces of fire fighting equipment. This equipment ranges from the typical engine, ladder truck and rescue vehicle to the more specialized vehicles used for off-road fighting of brush fires, performing technical rescue services and shoreline travel on boardwalks and beaches.

Basic and advanced firefighting training is offered through the SC Fire Academy operated by the Vocational Education and Extension Board under contract with the SC Department of Fire, Rescue and Emergency Services. The training takes the form of year-round classroom instruction at fire stations and the Fire Academy in Yaphank. Live fire training is also conducted at the academy operated training

center, also in Yaphank, which operates nearly every weekday evening and on weekends from April 1 through November 30.

Figure 4-51. Fire Districts in Suffolk County

Source: SC GIS

Alarm receipt and dispatch is varied and ranges from individual fire departments handling a call to Public Safety Answering Points (PSAPs) or neighboring fire districts providing dispatch services and/or alarm communications. The vast majority of fire departments utilize tone alert pagers or radios in the low band radio spectrum. Typically neighboring fire departments share each other's operating frequencies for interoperability purposes. Additionally, each fire department has at least one portable radio that can operate on Suffolk County's 800 MHZ trunked radio system for use during local and regional events emergencies and disasters.

The overwhelming majority of alarm calls are handled by the local fire agency having jurisdiction. However, mutual aid agreements exist on the state, county and local levels to provide for additional resources should the agency having jurisdiction require it. In some instances, mutual aid is automatically provided by prior agreements for structure fires during certain time frames or for high risk facilities. In all instances the highest ranking officer of the agency having jurisdiction is in command of any fire or emergency.

Emergency Medical Services

Emergency Medical Services (EMS) in SC are provided through a number of different entities. There are 100 separate ambulance services in the county comprised almost entirely of volunteers. This total consists of sixty-nine (69) local fire departments which provide EMS services, twenty-seven (27) independent Volunteer Ambulance Companies, and four (4) additional dedicated entities providing

services to specific places such as Brookhaven National Laboratory. All of these entities provide emergency medical services; however they are governed and structured in different fashions

The Fire Department based EMS services are a function within the volunteer fire departments and fall under the responsibilities of each fire districts publicly elected unpaid governing Commission. Fire districts, similar to towns and villages, are a local form of government created pursuant to state statutes. They have the power and authority to provide fire protection and emergency medical services within their boundaries and to levy taxes and incur debt to accomplish those responsibilities. One fire district has no higher authority over another nor can it be superseded in authority by a village, town, county or the state government.

An independent volunteer Ambulance Company is typically run by three (3) publicly elected unpaid officials. Ambulance Improvement Districts unlike fire districts cannot levy taxes or incur debt to pay for their responsibilities and needs. Instead, they establish contracts with their local municipalities for funding, and it is the municipality which has the ability to levy taxes and incur debt to provide for the EMS service. The individual Ambulance Companies have responsibility for emergency medical services within their respective boundaries, and work in conjunction with other ambulance companies, fire departments and police as necessary to ensure that the appropriate resources are directed where and when they are needed.

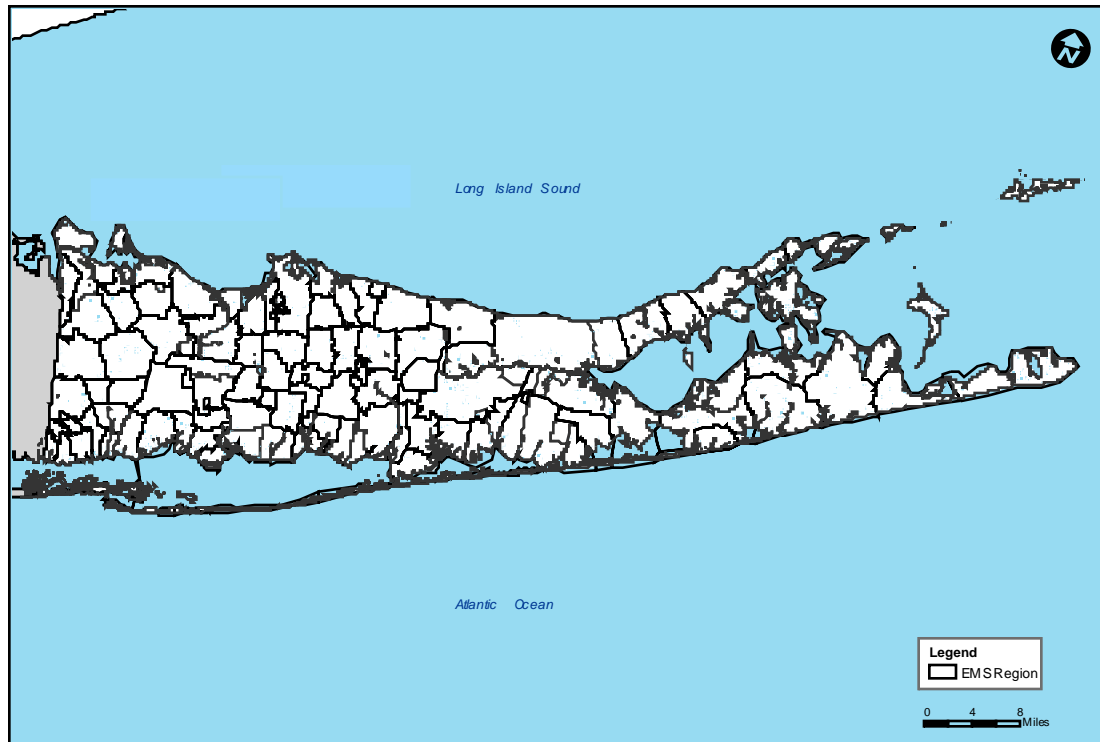

The other dedicated EMS entities are salaried functions unlike the volunteer structure in the fire departments and ambulance companies. This fact does not affect the ability to work in conjunction with the fire departments and independent ambulance companies as particular needs arise.

The emergency medical service functions in SC include both Basic Life Support (BLS) and Advanced Life Support (ALS) capabilities. The advanced life support capability entails specialized training in the administration of medications and the performance of life saving measures in the field. The combined Suffolk County EMS capability consists of seventeen (17) agencies of BLS and eighty three (83) agencies of ALS. In total, there are two hundred thirty seven (237) ambulance vehicles and six (6) common carriers available within the county to respond to emergency situations as needed.

The SC Division of Emergency Medical Services within the Department of Health Services has the responsibility for the administration and oversight of Suffolk's emergency medical services system and the training and certification of EMS personnel. The Division also has the responsibility for the overall coordination of the emergency system and the development of support services to aid in improving all phases of emergency medical care.

Figure 4-52 illustrates the EMS regions in SC.

Transportation Systems

This section discusses transportation systems including: highways and highway bridges, bus service, railroads, airports, and marine services.

Highways and Highway Bridges

SC is located within NYS Department of Transportation Region 10 area which encompasses both Nassau and Suffolk Counties. SC maintains over 420 miles of County roads, 140 bridges, culverts and miscellaneous structures, 300 waterways and operates 730 traffic signals. SC is responsible for snow removal on County roads only. The SC Department of Public Works constructs, maintains and operates County properties and designs, constructs and maintains County roads, sewerage systems, buildings and other facilities, such as waterways, bridges, docks and marinas (SC Public Works, 2007). Based on input from SC GIS and the Planning Committee, there are over 600 highway bridges in the County. Table 4-18 lists SC maintained roads. Figure 4-53 shows major transportation roadways in SC.

Figure 4-54. Transportation Map of SC

Source: SC Department of Planning

Interstate 495, also referred to as the Long Island Expressway, runs west to east across Long Island from Queens to Riverhead in SC. There are six State Parkways that traverse the County which include Heckscher, Northern State, Robert Moses, Saktigos, Southern State and Sunken Meadow. According to SC GIS Department roads data, there are 40.9 miles of Interstate, 49.6 miles of State Parkway, 357.8 miles of State Highway, and 104.41 miles of County Roads in the County. Additionally, the Ram Island First, Ram Island Second and Shell Beach Causeways are critical to Shelter Island's highway infrastructure.

According to SC Fire Rescue and Emergency Services (FRES) and input from the Planning Committee, there are 602 highway bridges in the County. HAZUS-MH only identifies 354 state and county-owned highway bridges in the County with a default replacement value totaling over \$7 billion.

The Comprehensive All-Hazards Emergency Management Plan for SC (March 2005) identifies the most essential routes for evacuating vulnerable populations. These routes are: (1) Route 25 and Cross River Drive intersection, east of Riverhead; (2) Sunrise Highway (Route 27) and North Sea Road intersection, Southampton; (3) Route 111 (Islip Avenue) and Southern State Parkway interchange; (4) Nugent Road and West Main Street interchanges with Long Island Expressway, west of Riverhead; (5) Montauk Highway (Route 27), east of Southampton; (6) Wellwood Avenue and Sunrise Highway (Route 27), north of Lindenhurst; and Ferry service out of Fire Island. Additionally, according to the Town of Babylon, the Town of Babylon's evacuation routes, which run from south to north, are: (1) Broadway/NYS Route 110; (2) Great Neck Road (CR 47); (3) Straight Path (CR2); (4) Little East Neck Road; and (5) Deer Park

Avenue/NYS Route 231. It is important to note that Montauk Highway and Sunrise Highway are both within a geographical area most at risk to coastal storms.

Bus

Long Island Bus, a part of the Metropolitan Transportation Authority (MTA), provides bus service throughout western SC. SC Transit also provides public bus service throughout SC. Additionally, SC Accessible Transportation (SCAT) provides curb-to-curb service to individuals with disabilities and the Huntington Area Rapid Transit (HART) also provides public bus service. Table 4-19 lists the bus facilities in SC.

Railroad

The MTA Long Island Rail Road (LIRR), a subsidiary of NYS' MTA, is the busiest commuter railroad in North America, carrying an average of 282,400 customers each weekday on 728 daily trains throughout Long Island. Third-rail electric service is offered on the lines to Babylon, Huntington, Port Washington, and Ronkonkoma, and diesel service is provided on the lines to Port Jefferson, Montauk and Greenport (MTA online, accessed 2007). The LIRR Babylon Branch, within the Town of Babylon, is elevated an average of 20 feet above surrounding grade. From the Babylon/Islip Town boundary to the Village of Lindenhurst, the tracks sit on a solid earthen structure (Feitner, 2007). Tables 4-20 and 4-21 inventory the railroad facilities and bridges in SC.

Access to Shelter Island is limited to transportation by ferry, private boat, or private airplane. According to the Shelter Island Comprehensive Plan, its two private air strips do not accommodate commercial service and only a small amount of the population accesses the island via air. The North and South Ferries provide the main transportation link to Shelter Island. North Ferry runs from Shelter Island Heights to Greenport in the Town of Southold and South Ferry runs from Shelter Island to North Haven in the Town of Southampton. These are private ferries that are publicly regulated; these firms transport both passengers and automobiles. Ferry traffic increased 40% from 1982 to 1992, transporting nearly one million automobiles on/off the island in 1992 (Shelter Island, 1994). Because Shelter Island relies so heavily on marine transportation, anchorages and dockage were also identified as crucial to their transportation inventory (Table 4-26).

Table 4-26. Anchorage and Dockage for Shelter Island

Lifeline Utility Systems

Lifelines include utility services and infrastructure that provide water, power, and other necessary services to residents. Due to heightened security concerns, some location information for lifelines is not provided in the plan, although the number of facilities and their general location is considered (as data are available). Additionally, because the majority of power supply lines are privately held, this information is generally difficult to obtain and is not for public release. However, consideration of the utilities in the area is presented below to support the risk assessment in Section 5.

Potable Water Supply

Long Island's groundwater system is a federally-designated "sole source" aquifer. Additionally, the area is also identified as a Primary Water Supply Aquifer by NYS Department of Health (1981) and NYS Department of Environmental Conservation (1987) (EPA, 2007). EPA defines a sole-source aquifer as an aquifer that supplies 50-percent or more of the drinking water for an area. The recharge in the area is 990 million gallons per day (MGD). The total capacity of the aquifers underlying SC is about 70 trillion gallons. Most of this water is returned to the aquifer with consumptive loss estimated at 95 MGD. The consumptive loss is through pumping, personal use, sewage systems, marine discharges and evapotranspiration associated with irrigation and lawn sprinkling (Earth Science Educational Resource Center, Date Unknown).

The SC Water Authority (SCWA) services a majority of SC's population. According to the 2007 Annual Drinking Water Quality Report, SCWA serves over 1.1 million customers in the County. SCWA maintains 621 wells that pump water from the Long Island Aquifer (SCWA, 2007). In addition to SCWA, a portion of the Town of Babylon (7,500 people) is serviced by the East Farmingdale Water District (Feitner and Hanse, 2006; LI Water Conference, accessed online 2007). The Riverhead Water District services the Town of Riverhead. The Riverhead Water District maintains thirteen (13) wells that are drilled into the Glacial and Magothy aquifers (Riverhead Water District, 2006). The Town of Huntington is served by SCWA, Dix Hills Water District, Greenlawn Water District, and South Huntington Water District. The Town of Smithtown is served by SCWA, Brentwood Water District, St.

James Water District, and Smithtown Water District (LI Water Conference, accessed online 2007). There are three public water supply systems on Shelter Island: Shelter Island Heights, West Neck (approximately 60 home) and Dering Harbor (approximately 20 homes). The remainder of the population relies upon “on-site facilities” (Shelter Island, 1994; Card, 2007).

There are approximately 77,000 individual private wells serving over 200,000 people in SC. The SC Department of Health Services operates an extensive water testing program to help residents with private wells determine the quality of their drinking (SC Department of Health Services, accessed online 2007).

Wastewater Facilities

According to SC GIS data, there are 25 sewer districts in SC. Table 4-27 lists the wastewater treatment facilities in the County and Table 4-28 lists the wastewater pumps or lift stations in the County. The wastewater treatment facilities’ replacement value is the default value provided in HAZUS-MH. This default value may be overestimating the replacement cost for several of the smaller plants listed. Please note several of the pump/lift stations have identical names (e.g., there are five Pump Station #1’s in the Town of Brookhaven). Although they are assigned the same name, each station has a different physical address.

In Sewer District 3, in southwestern SC, the SC Department of Public Works maintains a 72-inch ocean outfall that disposes treated sewage from the Towns of Babylon and Islip 2.5 miles into the Atlantic Ocean. The outfall route is from Bergen Point (Fleet Point) through Cedar Island to the ocean and its construction is vulnerable to storm activity and coastal erosion (Wright, 2007). The original construction of the outfall had cover over the pipe at the shoreline approximately 17 feet. Storms have reduced that cover to 8 feet at the shoreline and less to the south. In 1992, a project was implemented (\$3.5 million) to install 700 feet of sheeting with a rehabilitated cathodic protection system at the shoreline.

Utilities

Electric power is transmitted and distributed by the LIPA. The Iroquois Gas Pipeline supplies natural gas to Keyspan and Keyspan provides natural gas to residents and businesses in SC. Figure 4-56 illustrates the general location of the Iroquois Gas Pipeline. Tables 4-29 and 4-30 inventory the electric power plant facilities and substations, respectively, in SC.

Electric, telephone and cable utility lines cross Shelter Island Sound to Shelter Island. The power line is a connecting line to the south fork from the north fork, so they can route power in case of a line failure (Card, 2007).

High-Potential Loss Facilities

High-potential loss facilities include dams, levees, nuclear power plants, and military installations.

Dams

According to the National Inventory of Dams (NID), and input from the Planning Committee, there are twenty-three (23) dams in the County. A dam is included in the NID if: (1) it is a “high” or “significant” hazard potential class dam or, (2) it is a “low” hazard potential class dam that exceeds 25 feet in height and 15 acre-feet storage or, (3) it is a “low” hazard potential class dam that exceeds 50 acre-feet storage and 6 feet height. No dams have been identified as high hazard dams in the County. The dam hazard classification is unknown for dams provided by the Planning Committee that are not on the NID. Table 4-32 defines the hazard potential classification, as accepted by the NID Interagency Committee on Dam Safety. Table 4-33 lists the dams in SC.

Table 4-32. Dam Hazard Potential Classifications

Hazard Potential Classification	Loss of Human Life	Economic, Environmental, and Lifeline Losses
Low	None expected	Low and generally limited to owner
Significant	None expected	Yes
High	Probable. One or more expected	Yes (but not necessary for this classification)

Notes: NA = Not available.

(1) HAZUS-MH (2005) (2) Information from the National Inventory of Dams

* The failure of these dams could threaten critical transportation routes to hospitals; therefore, the Town of Babylon feels their downstream hazard should be elevated to significant.

HAZMAT Facilities

SC FRES identified hazardous materials (HAZMAT) facilities in the County. Updated jurisdiction-specific data on HAZMAT facilities is not currently available. The EPA Toxics Release Inventory (TRI) database identifies 113 TRI facilities in the County. TRI facilities are those required to report on chemical storage and use based on particular volumes of specified chemicals stored and used.

User-Defined Facilities

The Planning Committee identified additional facilities as critical including municipal halls, Department of Public Works facilities and yards, Department of Transportation facilities, points of distribution (PODs), and cultural resources such as beaches. These facilities were included in the risk assessment conducted for the County. Table 4-36 is a partial list of these user-defined critical facilities (municipal halls, Department of Public Works and Highway Departments) in SC.
